FINQ FIRST U.S. Large Cap AI-Managed Equity ETF
FINQ DOLLAR NEUTRAL U.S. Large Cap AI-Managed Equity ETF
(the “Funds”)

Each listed on NYSE Arca, Inc.

March 9, 2026

**Supplement to the Summary Prospectuses, each dated February 4, 2026,
Statutory Prospectus, and Statement of Additional Information (the “SAI”)
each dated February 2, 2026**

Effective immediately, the following is added to the section titled “Management – Portfolio Managers – Sub-Adviser” of each Summary Prospectus and on pages 6 and 14 of the Prospectus, directly following the existing disclosure related to Dan Solomon:

Eran Shoshani, Portfolio Manager of the Sub-Adviser, has been a portfolio manager of the Fund since March 2026.

Effective immediately, the disclosure in the section titled “Management – Portfolio Managers” on page 21 of the Prospectus, is deleted and replaced in its entirety with the following:

Portfolio Managers

Dan Solomon, since the Funds’ inception in February 2026, and Eran Shoshani, since March 2026, have been primarily responsible for the day-to-day management of the Funds, and Charles A. Ragauss, CFA, since the Fund’s inception, has overseen trading and execution for each Fund.

Dan Solomon, Portfolio Manager for the Sub-Adviser

Mr. Solomon is an Israeli-licensed portfolio manager with over six years’ experience in equity research, investment strategy and portfolio management. He joined the Sub-Adviser in June 2024 and currently serves as an Equity Research Analyst, leading company-level analysis and supporting fund strategy development. Prior to joining the Sub-Adviser, Mr. Solomon spent nearly six years at Infinity Investment Group, a wealth management firm, where he managed portfolios for high net worth individuals and corporate clients, with responsibilities including developing tailored investment plans, conducting deep-dive equity and asset allocation analyses, financial modeling and identifying macro and sector-specific investment opportunities. Mr. Solomon received a Bachelor of Arts degree in Business Administration and Finance from Reichman University, Herzliya, Tel Aviv District, Israel in 2018.

Eran Shoshani, Portfolio Manager for the Sub-Adviser

Mr. Shoshani is an Israeli-licensed portfolio manager with over eight years of experience in investment research and portfolio management. He joined the Sub-Adviser in November 2025 and currently serves as a Senior Investment Analyst. Prior to joining the Sub-Adviser, Mr. Shoshani spent two years at eToro, a global trading and investment platform, as an Investment Research Analyst, where he contributed to investment strategy development and thematic research. Earlier in his career, he served as an Analyst, Hedge Fund Manager at Infinity Investment Group, a wealth management firm, for three years overseeing fund strategy and structured product development. Mr. Shoshani also served as a Securities Lending Manager and Trader at Union Bank for two years. Mr. Shoshani received an MBA in Business Analytics, Finance, and Strategy from The Open University of Israel in 2019 and a B.Sc. in Aerospace Engineering from the Technion – Israel Institute of Technology in 2014.

Charles A. Ragauss, CFA, Portfolio Manager for the Adviser

Mr. Ragauss serves as Portfolio Manager of the Adviser, having joined the Adviser in September 2020. Mr. Ragauss previously served as Chief Operating Officer and in other roles at CSat Investment Advisory, L.P. from April 2016 to September 2020. Previously, Mr. Ragauss was Assistant Vice President at Huntington National Bank (“Huntington”), where he was Product Manager for the Huntington Funds and Huntington Strategy Shares ETFs, a combined fund complex of almost \$4 billion in assets under management. At Huntington, he led ETF development, bringing to market some of the first actively-managed ETFs. Mr. Ragauss joined Huntington in 2010. Mr. Ragauss attended Grand Valley State University where he received his Bachelor of Business Administration in Finance and International Business, as well as a minor in French. He is a member of both the National and West Michigan CFA societies and holds the CFA designation.

CFA® is a registered trademark owned by the CFA Institute.

The Funds’ SAI provides additional information about each portfolio manager’s compensation structure, other accounts that each portfolio manager manages, and each portfolio manager’s ownership of Shares.

Effective immediately, the first sentence of the section titled “Portfolio Managers” on page 17 of the SAI is deleted in its entirety and replaced with the following disclosure:

The Funds are managed by Dan Solomon and Eran Shoshani, Portfolio Managers for the Sub-Adviser, and Charles A. Ragauss, Portfolio Manager for the Adviser.

Effective immediately, the disclosure in the section titled “Portfolio-Managers – Other Accounts” on page 17 of the SAI, is deleted and replaced in its entirety with the following:

Other Accounts. In addition to the Funds for which each serve as portfolio manager, as noted below, the portfolio managers managed the following other accounts as of December 31, 2025:

Dan Solomon, Portfolio Manager for the Sub-Adviser

Type of Accounts	Total Number of Accounts	Total Assets of Accounts (in millions)	Total Number of Accounts Subject to a Performance-Based Fee	Total Assets of Accounts Subject to a Performance-Based Fee (in millions)
Registered Investment Companies	0	\$0	0	\$0
Other Pooled Investment Vehicles	0	\$0	0	\$0
Other Accounts*	22	\$0.54	0	\$0

* Other accounts reflect those managed by Mr. Solomon on behalf of clients of an affiliate of the Sub-Adviser.

Eran Shoshani, Portfolio Manager for the Sub-Adviser

Type of Accounts	Total Number of Accounts	Total Assets of Accounts (in millions)	Total Number of Accounts Subject to a Performance-Based Fee	Total Assets of Accounts Subject to a Performance-Based Fee (in millions)

Effective immediately, the disclosure in the section titled “Portfolio-Managers – Portfolio Manager Compensation” on page 18 of the SAI, is deleted and replaced in its entirety with the following:

Portfolio Manager Compensation. Messrs. Solomon and Shoshani are compensated by the Sub-Adviser with a fixed global salary, which is not contingent upon the performance of the investments or the funds.

Mr. Ragauss is compensated by the Adviser with a base salary and discretionary bonus based on the financial performance and profitability of the Adviser and not based on the performance of the Funds. Mr. Ragauss is an equity owner of the Adviser and therefore may benefit indirectly from the revenue generated by the Funds’ Advisory Agreement with the Adviser.

Please retain this Supplement for future reference.

SUMMARY INFORMATION

FINQ FIRST U.S. LARGE CAP AI-MANAGED EQUITY ETF - FUND SUMMARY

Investment Objective

The FINQ FIRST U.S. Large Cap AI-Managed Equity ETF (the “Fund”) seeks long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.70%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	<u>0.70%</u>

(1) The Fund’s investment adviser, Tidal Investments LLC (“Tidal” or the “Adviser”), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the “1940 Act”), and litigation expenses, and other non-routine or extraordinary expenses (collectively, the “Excluded Expenses”).

(2) Estimated for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$72	\$224

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund, an exchange-traded fund (“ETF”), is actively managed and seeks to achieve its investment objective primarily by taking long (buy) positions in equity securities of U.S. large-cap companies based on the results of a proprietary adaptive artificial intelligence (“AI”) framework (the “Model”). The Fund defines a large-cap company to be any company that is included in the S&P 500[®] Index (the “Index”). The Index is a market capitalization weighted index representing the 500 largest public companies in the United States. The Fund’s investments are determined by the stock rankings and weightings as generated by the Model which was developed and is maintained by FINQ AI, LLC (the “Sub-Adviser”) and its affiliates. An “adaptive” AI framework is one designed to learn, evolve, and dynamically adjust its behavior and decision-making based on real-time data and market changes, rather than relying on static, predefined rules.

AI-Managed Ranking System

The Fund's investments are determined by the Model which, at its core, is an adaptive relative ranking system that, on a daily basis, continuously ranks all 500 stocks comprising the Index from "1" (being most relatively attractive as determined by the Model) to "500" (being the least relatively attractive). The Model does not predict future performance, but rather, drawing from factors described below, establishes a dynamic and evolving "view" of each stock as to its relative positioning or attractiveness, based solely on how each stock ranks compared to its peers in the Index. Stocks ranked at the top may not necessarily "outperform" and those ranked at the bottom may not necessarily decline in value, but the Model's relative positioning of each stock as compared to its peers dictates the investment selection process (as discussed below).

In formulating its view and rankings of relative attractiveness, the Model compares and processes a wide range of financial news and other data relevant to each company represented in the Index, gathered from public media sources, industry and institutional data providers and financial and regulatory filings databases. The Model processes these data inputs through its adaptive AI framework to arrive at relative attractiveness rankings and positioning. The Model:

- **Draws** from "common wisdom" (*i.e.*, widely accepted beliefs and conventional advice regarding investment and market trends that drive public market behavior), "professional wisdom" (*i.e.*, institutional data, insights and expertise from financial professionals, market analysts and asset managers), "fundamental signals" (*i.e.*, indicators of companies' financial health, performance, and future growth potential, such as key financial and valuation metrics, economic and industry trends, qualitative factors and market sentiment), and "regulatory interpretations" (*i.e.*, relevant regulatory requirements and limitations).
- **Ingests** third-party natural language processing (NLP) data. The data is derived from written text or recorded speech, such as financial analyst reports, news sources, social media and blog posts NLP techniques are then used to extract relevant financial information, which informs the system's analysis of market and company fundamentals, events, trends, themes, sentiments, and structures; and
- **Applies** advanced machine learning techniques allowing the system to evolve and self-correct over time. These include:
 - genetic algorithms (*i.e.*, search techniques designed to find optimal solutions to complex problems);
 - reinforcement learning (*i.e.*, trial-and-error processes used to train AI systems to learn optimal outcomes); and
 - adaptive signal optimization (*i.e.*, techniques to adjust or respond to constantly changing signals or inputs).

The Model is an AI-managed system that operates fully autonomously, without human intervention or interference. It functions end-to-end based on AI logic and the learned elements of the system described above. The system methodology results in a daily, model-generated ranking of all 500 stocks in the Index and the Fund's portfolio is constructed directly based on this ranking process as described below.

AI-Managed Investment Selection, Weighting and Rebalancing

The Fund's portfolio is selected based wholly on the rankings generated by the Model, which typically includes the Model's top 14 to 20 ranked stocks. Using the same adaptive AI framework to draw, ingest and apply data inputs as described above, the Model determines, on a daily basis, the specific stock positions invested in by the Fund (which vary as the Model's rankings change), and the optimal number of stock positions (*i.e.*, typically between typically 14 to 20) based upon weightings assigned by the Model to each ranked position in the Fund's portfolio. In making a daily determination of the stocks to be held by the Fund and individual position weightings, the Model takes into account regulatory investment restrictions and limitations applicable to the Fund, including compliance with tax diversification requirements applicable to registered investment companies under the Internal Revenue Code of 1986, as amended (the "Code").

The Sub-Adviser supervises and monitors the Model to detect and address any potential malfunctions or technology issues impacting the Model's performance, which includes reviewing the Model's outputs to ensure they adhere to the built-in rules and parameters. The Sub-Adviser will not alter the Model's programming, and will not intervene or override the Model's ranked selection, weighting and rebalancing outputs other than to ensure the Fund remains in compliance with applicable regulatory requirements.

Actual performance of the Fund may differ from the performance of the Model's selected and weighted stock positions due to factors including (i) timing differences between when the Model generates its outputs and when corresponding portfolio securities transactions are executed and settled, (ii) brokerage commissions, transactions costs and other fees and expenses of the Fund; and (iii) any Fund holdings of cash or cash equivalents for operational or liquidity purposes. Accordingly, there can be no assurance that the Fund's performance will fully reflect the performance of the Model's selected and weighted stock positions.

Portfolio Characteristics

The Fund invests, under normal circumstances, at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in equity securities of U.S. large-cap companies.

The Fund is deemed to be non-diversified under the 1940 Act, which means that it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. The Fund's portfolio of Index stocks, selected and weighted as dictated by the Model's outputs, will be focused in certain sectors from time to time to the extent that stocks represented in the Index are focused in those sectors. As of the date of this Prospectus, the most prevalent sectors in the Index, based on market capitalization, included the communications, consumer discretionary, finance, healthcare and technology sectors. The Fund's exposure to one or more market sectors is subject to change over time.

The Fund is expected to have a moderate to high portfolio turnover rate on an annual basis.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in each Fund."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Equity Market Risk. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from specific issuers. The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.

Large-Capitalization Investing Risk. The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.

Limited Holdings Risk. Although the Fund does not intend to concentrate in any particular industry, it will hold a limited number of securities. As a result, it may be more volatile and have a greater risk of loss than more broadly diversified funds.

Sector Focus Risk. The Fund may invest a significant portion of its assets in one or more sectors and as a result will be more susceptible to the risks affecting those sectors. While the Fund's sector exposure is expected to vary over time, the Fund anticipates that it may be subject to some or all of the sector-specific risks described below, and could be negatively impacted by market events or economic factors affecting such sectors.

Communications Sector Risk. Communication companies are particularly vulnerable to the potential obsolescence of products and services due to technological advancement and the innovation of competitors. Companies in the communications sector may also be affected by other fierce competitive pressures, including pricing competition. They may also be adversely affected by research and development costs, substantial capital requirements, and increased governmental regulation.

Consumer Discretionary Sector Risk. The success of consumer product manufacturers and retailers is tied closely to the performance of the overall domestic and global economy, interest rates, competition, and consumer confidence. Success depends heavily on disposable household income and consumer spending. Also, companies in the consumer discretionary sector may be subject to severe competition, which may have an adverse impact on their respective profitability. Changes in demographics and consumer tastes can also affect the demand for, and success of, consumer products and services in the marketplace.

Finance Sector Risk: Companies in the finance sector may underperform the broader markets due to legislative or regulatory changes, adverse market conditions and/or increased competition affecting the sector. Companies operating in the finance sector are subject to extensive government regulation, which may limit their ability to leverage their capital. Interest rates and banking fees are also regulated by federal and state authorities. Profitability is largely dependent on the availability and cost of deposit funds, as impacted by statutory reserve requirements which can fluctuate significantly when interest rates change, or the sector faces increased competition from less regulated competitors. The sector is also affected by ongoing technology investments in and upgrades to legacy systems in order to meet regulatory reporting requirements.

Healthcare Sector Risk: Companies' profitability in the healthcare sector may be negatively impacted by government regulations and government healthcare programs, increases or decreases in the cost of medical products and services, an increased emphasis on outpatient services, and product liability claims, among other factors. Many healthcare companies are heavily dependent on patent protection, and the expiration of a company's patent may adversely affect that company's profitability. Healthcare companies are subject to competitive forces that may result in price discounting, and may be thinly capitalized and susceptible to product obsolescence.

Technology Sector Risk. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions. There can be no assurance that the Fund will grow to or maintain an economically viable size.

New Sub-Adviser Risk. The Sub-Adviser is a recently formed entity and has no experience with managing an ETF, which may limit the Sub-Adviser's effectiveness.

General Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. The market value of a security in the Fund's portfolio may move up or down, sometimes rapidly and unpredictably. These fluctuations may cause a security to be worth less than the price the Fund originally paid for it, or less than it was worth at an earlier time. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes, due to a number of factors, including inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters or events, pandemic diseases, terrorism, regulatory events, and government controls.

High Portfolio Turnover Risk. The Fund may actively trade all or a significant portion of the securities in its portfolio. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Management Risk. The Fund is actively-managed and may not meet its investment objective based on the Model's implementation of the investment strategies for the Fund, subject to the oversight and monitoring of the Sub-Adviser.

Models and Data Risk. The Fund's portfolio holdings are fully dependent on proprietary models as well as information and data supplied by third parties (Models and Data). When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon may lead to the inclusion or exclusion of securities from the Fund's portfolio that would have been excluded or included had the Models and Data been correct and complete. Additionally, technology risk arises from the use of computer models and algorithms; any technical failures, coding errors, or cybersecurity breaches could disrupt the Fund's trading activities, potentially leading to significant financial losses and compromised data integrity.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties, or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund, Adviser, and Sub-Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Recent Market Events Risk. U.S. and international markets have experienced and may continue to experience significant periods of volatility in recent years and months due to a number of economic, political and global macro factors including uncertainty regarding inflation and central banks' interest rate changes, the possibility of a national or global recession, trade tensions and tariffs, political events, war, and geopolitical conflict. These developments, as well as other events, could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets, despite efforts to address market disruptions. As a result, the risk environment remains elevated.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.finqi.com/etfs.

Management

Investment Adviser: Tidal Investments LLC serves as investment adviser to the Fund.

Investment Sub-Adviser: FINQ AI, LLC serves as an investment sub-adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Investment Adviser

Charles A. Ragauss, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2026.

Sub-Adviser

Dan Solomon, Portfolio Manager of the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2026.

CFA[®] is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.finqai.com/etfs.

Tax Information

Fund distributions are generally taxable to shareholders as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in a tax-deferred or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those arrangements.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser, the Sub-Adviser or their affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

SUMMARY INFORMATION

FINQ DOLLAR NEUTRAL U.S. LARGE CAP AI-MANAGED EQUITY ETF - FUND SUMMARY

Investment Objective

The FINQ DOLLAR NEUTRAL U.S. Large Cap AI-Managed Equity ETF (the “Fund”) seeks long-term capital appreciation and to achieve absolute returns.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	1.25%
Distribution and Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	1.25%

(1) The Fund’s investment adviser, Tidal Investments LLC (“Tidal” or the “Adviser”), a Tidal Financial Group company, will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the “1940 Act”), and litigation expenses, and other non-routine or extraordinary expenses (collectively, the “Excluded Expenses”).

(2) Estimated for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$127	\$397

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund, an exchange-traded fund ("ETF"), is actively-managed and seeks to achieve its investment objective by generating absolute returns through a dollar-neutral investing approach based on the results of a proprietary adaptive artificial intelligence ("AI") framework (the "Model"). This approach involves taking long (buy) and short (sell) positions in equity securities of U.S. large-cap companies. The Fund defines a large-cap company to be any company that is included in the S&P 500[®] Index (the "Index"). The Index is a market capitalization weighted index representing the 500 largest public companies in the United States. A dollar-neutral portfolio aims to profit from the relative performance of assets, not overall market direction (as described more fully below). The Fund's long and short dollar-neutral investments are determined by the stock rankings and weightings as generated by the Model, which was developed and is maintained by FINQ AI, LLC (the "Sub-Adviser") and its affiliates. An "adaptive" AI framework is one designed to learn, evolve, and dynamically adjust its behavior and decision-making based on real-time data and market changes, rather than relying on static, predefined rules.

AI-Managed Ranking System

The Fund's investments are determined by the Model which, at its core, is an adaptive relative ranking system that, on a daily basis, continuously ranks all 500 stocks comprising the Index from "1" (being most relatively attractive as determined by the Model) to "500" (being the least relatively attractive). The Model does not predict future performance, but rather, drawing from factors described below, establishes a dynamic and evolving "view" of each stock as to its relative positioning or attractiveness, based solely on how each stock ranks compared to its peers in the Index. Stocks ranked at the top may not necessarily "outperform" and those ranked at the bottom may not necessarily decline in value, but the Model's relative positioning of each stock as compared to its peers dictates the investment selection process (as discussed below).

In formulating its view and rankings of relative attractiveness, the Model compares and processes a wide range of financial news and other data relevant to each company represented in the Index, gathered from public media sources, industry and institutional data providers and financial and regulatory filings databases. The Model processes these data inputs through its adaptive AI framework to arrive at relative attractiveness rankings and positioning. The Model:

- **Draws** from "common wisdom" (*i.e.*, widely accepted beliefs and conventional advice regarding investment and market trends that drive public market behavior), "professional wisdom" (*i.e.*, institutional data, insights and expertise from financial professionals, market analysts and asset managers), "fundamental signals" (*i.e.*, indicators of companies' financial health, performance, and future growth potential, such as key financial and valuation metrics, economic and industry trends, qualitative factors and market sentiment), and "regulatory interpretations" (*i.e.*, relevant regulatory requirements and limitations).
- **Ingests** third-party natural language processing (NLP) data. The data is derived from written text or recorded speech, such as financial analyst reports, news sources, social media and blog posts. NLP techniques are then used to extract relevant financial information, which informs the system's analysis of market and company fundamentals, events, trends, themes, sentiments, and structures; and
- **Applies** advanced machine learning techniques allowing the system to evolve and self-correct over time. These include:
 - genetic algorithms (*i.e.*, search techniques designed to find optimal solutions to complex problems);
 - reinforcement learning (*i.e.*, trial-and-error processes used to train AI systems to learn optimal outcomes); and
 - adaptive signal optimization (*i.e.*, techniques to adjust or respond to constantly changing signals or inputs).

The Model is an AI-managed system that operates fully autonomously, without human intervention or interference. It functions end-to-end based on AI logic and the learned elements of the system described above. The system methodology results in a daily, model-generated ranking of all 500 stocks in the Index and the Fund's portfolio is constructed directly based on this ranking process as described below.

AI-Managed Investment Selection, Weighting and Rebalancing

The Fund's portfolio is selected based wholly on the rankings generated by the Model, which will reflect long positions in the top 10 to 14 ranked stocks, and short positions in the bottom 10 to 14 ranked stocks. A short sale is a transaction in which the Fund sells a security it does not own, typically in anticipation of a decline in the market price of that security. To effect a short sale, the Fund arranges through a broker to borrow the security it does not own to be delivered to a buyer of such security. In borrowing the security to be delivered to the buyer, the Fund will become obligated to replace the security borrowed at the time of replacement, regardless of the market price at that time. The Fund will hold a portfolio of cash or cash equivalents, such as short-term U.S. treasury obligations and other money market instruments, as collateral for the Fund's short positions.

Using the same adaptive AI framework to draw, ingest and apply data inputs as described above, the Model determines, on a daily basis, the specific 10 to 14 long (*i.e.*, highest ranked) and 10 to 14 short (*i.e.*, lowest ranked) stock positions invested in by the Fund (which vary as the Model's rankings change), with weightings assigned by the Model to each of the long and short positions in the Fund's portfolio. In making such determinations, the Model takes into account regulatory investment restrictions and limitations applicable to the Fund, including complying with tax diversification requirements applicable to registered investment companies under the Internal Revenue Code of 1986, as amended (the "Code").

The Model seeks to maintain a dollar-neutral Fund portfolio with the aim of balancing long and short investment exposures as a means to reduce market direction dependency and instead, focus on relative price performance among the long and short positions. For example, assume the Fund has a \$75 cash position to be invested on a dollar-neutral basis to achieve a \$100 long position in ABC stock and a \$100 short position in XYZ stock. The Fund in this example could sell short \$100 of XYZ stock, with the short sale proceeds increasing its cash position to \$175, and then buy \$100 of ABC stock. This results in a \$100 XYZ short position, a \$100 ABC long position and \$75 in remaining cash (available for collateral on the short sale). In this example, the Fund's net exposure is \$0 (\$100 long ABC stock - \$100 short XYZ stock = \$0), while its gross exposure – the sum of the absolute value of both long and short positions – is \$200. The use of leverage in this example (where gross exposure exceeds the capital invested) can amplify both potential gains and losses. See "*Principal Investment Risks – "Leverage Risk" and "Short Sales Risk"* below. The strategy aims to profit from the relative performance between such long and short positions, not from overall market direction. In other words, the strategy can potentially gain if the long positions outperform while the short positions underperform, while the dollar amounts invested in long and short positions act as a potential hedge against market-wide fluctuations. There is no guarantee, however, that a dollar-neutral investment strategy will be successful, achieve profits or avoid losses.

The Sub-Adviser supervises and monitors the Model to detect and address any potential malfunctions or technology issues impacting the Model's performance, which includes reviewing the Model's outputs to ensure they adhere to the built-in rules and parameters. The Sub-Adviser will not alter the Model's programming, and will not intervene or override the Model's ranked selection, weighting and rebalancing outputs other than to ensure the Fund remains in compliance with applicable regulatory requirements.

Actual performance of the Fund may differ from the performance of the Model's selected and weighted stock positions due to factors including (i) timing differences between when the Model generates its outputs and when corresponding portfolio securities transactions are executed and settled, (ii) brokerage commissions, transactions costs and other fees and expenses of the Fund; and (iii) any Fund holdings of cash or cash equivalents for operational or liquidity purposes. Accordingly, there can be no assurance that the Fund's performance will fully reflect the performance of the Model's selected and weighted stock positions.

Portfolio Characteristics

The Fund invests, under normal circumstances, at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in long and short positions in equity securities of U.S. large-cap companies.

The Fund is deemed to be non-diversified under the 1940 Act, which means that it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. The Fund's portfolio of long and short positions in Index stocks, selected and weighted as dictated by the Model's outputs, will be focused in certain sectors from time to time to the extent that stocks represented in the Index are focused in those sectors. As of the date of this Prospectus, the most prevalent sectors in the Index, based on market capitalization, included the communications, consumer discretionary, finance, healthcare and technology sectors. The Fund's exposure to one or more market sectors is subject to change over time.

The Fund is expected to have a moderate to high portfolio turnover rate on an annual basis.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in each Fund."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Dollar-Neutral Strategy Risk. The Fund uses short positions in combination with long positions in a dollar-neutral strategy with the aim of profiting from the relative performance of assets, rather than from overall market movements. The Fund's strategy may result in greater losses or lower positive returns than if the Fund held only long positions, and the Fund's short positions could result in unlimited losses. Due to limited availability of shorts or other market factors, the Fund may be unable to match its long and short positions expressed in dollars for a period of time. The overall performance of the Fund depends on the net performance of its long and short positions, and it is possible for the Fund to experience a net loss across all positions. It is also possible that the Fund's long positions will decline in value at the same time that securities underlying the Fund's short positions increase in value, thereby increasing potential losses to the Fund.

Equity Market Risk. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from specific issuers. The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.

Large-Capitalization Investing Risk. The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.

Limited Holdings Risk. Although the Fund does not intend to concentrate in any particular industry, it will hold a limited number of securities. As a result, it may be more volatile and have a greater risk of loss than more broadly diversified funds.

Sector Focus Risk. The Fund may invest a significant portion of its assets in one or more sectors and as a result will be more susceptible to the risks affecting those sectors. While the Fund's sector exposure is expected to vary over time, the Fund anticipates that it may be subject to some or all of the sector-specific risks described below, and could be negatively impacted by market events or economic factors affecting such sectors.

Communications Sector Risk. Communication companies are particularly vulnerable to the potential obsolescence of products and services due to technological advancement and the innovation of competitors. Companies in the communications sector may also be affected by other fierce competitive pressures, including pricing competition. They may also be adversely affected by research and development costs, substantial capital requirements, and increased governmental regulation.

Consumer Discretionary Sector Risk. The success of consumer product manufacturers and retailers is tied closely to the performance of the overall domestic and global economy, interest rates, competition, and consumer confidence. Success depends heavily on disposable household income and consumer spending. Also, companies in the consumer discretionary sector may be subject to severe competition, which may have an adverse impact on their respective profitability. Changes in demographics and consumer tastes can also affect the demand for, and success of, consumer products and services in the marketplace.

Finance Sector Risk: Companies in the finance sector may underperform the broader markets due to legislative or regulatory changes, adverse market conditions and/or increased competition affecting the sector. Companies operating in the finance sector are subject to extensive government regulation, which may limit their ability to leverage their capital. Interest rates and banking fees are also regulated by federal and state authorities. Profitability is largely dependent on the availability and cost of deposit funds, as impacted by statutory reserve requirements which can fluctuate significantly when interest rates change, or the sector faces increased competition from less regulated competitors. The sector is also affected by ongoing technology investments in and upgrades to legacy systems in order to meet regulatory reporting requirements.

Healthcare Sector Risk: Companies' profitability in the healthcare sector may be negatively impacted by government regulations and government healthcare programs, increases or decreases in the cost of medical products and services, an increased emphasis on outpatient services, and product liability claims, among other factors. Many healthcare companies are heavily dependent on patent protection, and the expiration of a company's patent may adversely affect that company's profitability. Healthcare companies are subject to competitive forces that may result in price discounting, and may be thinly capitalized and susceptible to product obsolescence.

Technology Sector Risk. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.

Leverage Risk. Leverage risk refers to the potential for increased volatility and losses in a portfolio due to the use of short positions or other financial instruments that may magnify gains and losses beyond the initial investment. Leverage could possibly create increased volatility for the Fund. The effect of the use of leverage by the Fund in a market that moves adversely to its investments could result in substantial losses to the Fund, which would be greater than if the Fund were not leveraged.

Short Sales Risk. In connection with a short sale of a security or other instrument, the Fund is subject to the risk that instead of declining, the price of the security or other instrument sold short will rise. If the price of the security or other instrument sold short increases, the Fund will experience a loss, which is theoretically unlimited since there is a theoretically unlimited potential for the market price of a security or other instrument sold short to increase.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as “Authorized Participants” or “APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund’s investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., short positions). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may have less efficiency and pay out higher annual capital gain distributions to shareholders than if the in-kind redemption process was used. In addition, cash redemption costs could include brokerage costs or taxable gains or losses, which might not have otherwise been incurred if the redemption was fully in-kind.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund’s NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions. There can be no assurance that the Fund will grow to or maintain an economically viable size.

New Sub-Adviser Risk. The Sub-Adviser is a recently formed entity and has no experience with managing an ETF, which may limit the Sub-Adviser's effectiveness.

General Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. The market value of a security in the Fund's portfolio may move up or down, sometimes rapidly and unpredictably. These fluctuations may cause a security to be worth less than the price the Fund originally paid for it, or less than it was worth at an earlier time. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes, due to a number of factors, including inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters or events, pandemic diseases, terrorism, regulatory events, and government controls.

High Portfolio Turnover Risk. The Fund may actively trade all or a significant portion of the securities in its portfolio. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Management Risk. The Fund is actively-managed and may not meet its investment objective based on the Model's implementation of the investment strategies for the Fund, subject to the oversight and monitoring of the Sub-Adviser.

Models and Data Risk. The Fund's portfolio holdings are fully dependent on proprietary models as well as information and data supplied by third parties (Models and Data). When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon may lead to the inclusion or exclusion of securities from the Fund's portfolio that would have been excluded or included had the Models and Data been correct and complete. Additionally, technology risk arises from the use of computer models and algorithms; any technical failures, coding errors, or cybersecurity breaches could disrupt the Fund's trading activities, potentially leading to significant financial losses and compromised data integrity.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties, or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund, Adviser, and Sub-Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Recent Market Events Risk. U.S. and international markets have experienced and may continue to experience significant periods of volatility in recent years and months due to a number of economic, political and global macro factors including uncertainty regarding inflation and central banks' interest rate changes, the possibility of a national or global recession, trade tensions and tariffs, political events, war, and geopolitical conflict. These developments, as well as other events, could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets, despite efforts to address market disruptions. As a result, the risk environment remains elevated.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.finqai.com/etfs.

Management

Investment Adviser: Tidal Investments LLC serves as investment adviser to the Fund.

Investment Sub-Adviser: FINQ AI, LLC serves as an investment sub-adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Investment Adviser

Charles A. Ragauss, CFA, Portfolio Manager for the Adviser, has been a portfolio manager of the Fund since its inception in 2026.

Sub-Adviser

Dan Solomon, Portfolio Manager of the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2026.

CFA® is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.finqai.com/etfs.

Tax Information

Fund distributions are generally taxable to shareholders as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in a tax-deferred or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those arrangements.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser, the Sub-Adviser or their affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE FUNDS

Investment Objectives

The investment objective of each Fund is as follows:

- The FINQ FIRST U.S. Large Cap AI-Managed Equity ETF seeks long-term capital appreciation.
- The FINQ DOLLAR NEUTRAL U.S. Large Cap AI-Managed Equity ETF seeks long-term capital appreciation and to achieve absolute returns.

An investment objective is fundamental if it cannot be changed without the consent of the holders of a majority of the outstanding Shares. No Fund’s investment objective has been adopted as a fundamental investment policy and therefore each Fund’s investment objective may be changed without the consent of that Fund’s shareholders upon approval by the Board of Trustees (the “Board”) of Tidal Trust I (the “Trust”) and at least 60 days’ prior written notice to shareholders.

Principal Investment Strategies

There is no guarantee that each Fund’s investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Each Fund’s “80%” investment policy is non-fundamental and can be changed without shareholder approval. However, shareholders of that Fund would be given at least 60 days’ notice prior to any such change.

Investments by Registered Investment Companies

Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies. However, registered investment companies are permitted to invest in other investment companies beyond the limits set forth in Section 12(d)(1) in recently adopted rules under the 1940 Act, subject to certain conditions. Each Fund may rely on Rule 12d1-4 of the 1940 Act, which provides an exemption from Section 12(d)(1) that allows the Fund to invest beyond the limits set forth in Section 12(d)(1) if the Fund satisfies certain conditions specified in Rule 12d1-4, including, among other conditions, that the Fund and its advisory group will not control (individually or in the aggregate) an acquired fund (e.g., hold more than 25% of the outstanding voting securities of an acquired fund that is a registered open-end management investment company).

Temporary Defensive Strategies

Each Fund will employ its investment strategy regardless of whether there are periods of adverse market, economic, or other conditions and will not take temporary defensive positions during such periods.

Principal Risks of Investing in each Fund

The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a “principal risk” of investing in the Funds, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in a Fund. Some or all of these risks may adversely affect a Fund’s NAV per share, trading price, yield, total return, and/or ability to meet its investment objective.

The following risks could affect the value of your performance in the Funds: The risks below apply to each Fund as indicated in the following table. The number of risk factors applicable to a Fund does not necessarily correlate to the overall risk of an investment in that Fund. Additional information about each such risk and its potential impact on a Fund is set forth below the table.

Dollar-Neutral Strategy Risk. The Fund uses short positions in combination with long positions in a dollar-neutral strategy with the aim of profiting from the relative performance of assets, rather than from overall market movements. The Fund's strategy may result in greater losses or lower positive returns than if the Fund held only long positions, and the Fund's short positions could result in unlimited losses. Due to limited availability of shorts or other market factors, the Fund may be unable to match its long and short positions expressed in dollars for a period of time. The overall performance of the Fund depends on the net performance of its long and short positions, and it is possible for the Fund to experience a net loss across all positions. It is also possible that the Fund's long positions will decline in value at the same time that securities underlying the Fund's short positions increase in value, thereby increasing potential losses to the Fund.

Equity Market Risk. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from specific issuers. The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Cash Redemption Risk. The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. For example, the Fund may not be able to redeem in-kind certain securities held by the Fund (e.g., short positions). In such a case, the Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may have less efficiency and pay out higher annual capital gain distributions to shareholders than if the in-kind redemption process was used. In addition, cash redemption costs could include brokerage costs or taxable gains or losses, which might not have otherwise been incurred if the redemption was fully in-kind.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at market price that may be below, at or above the Fund's NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. As a result, the Fund could be adversely affected and be unable to implement its investment strategies in the event of an unscheduled closing.

General Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. The market value of a security in the Fund's portfolio may move up or down, sometimes rapidly and unpredictably. These fluctuations may cause a security to be worth less than the price the Fund originally paid for it, or less than it was worth at an earlier time. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes, due to a number of factors, including inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters or events, pandemic diseases, terrorism, regulatory events, and government controls.

High Portfolio Turnover Risk. The Fund may actively trade all or a significant portion of the securities in its portfolio. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Large-Capitalization Investing Risk. The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.

Leverage Risk. Leverage risk refers to the potential for increased volatility and losses in a portfolio due to the use of short positions or other financial instruments that may magnify gains and losses beyond the initial investment. Leverage could possibly create increased volatility for the Fund. The effect of the use of leverage by the Fund in a market that moves adversely to its investments could result in substantial losses to the Fund, which would be greater than if the Fund were not leveraged.

Limited Holdings Risk. Although the Fund does not intend to concentrate in any particular industry, it will hold a limited number of securities. As a result, it may be more volatile and have a greater risk of loss than more broadly diversified funds.

Management Risk. The Fund is actively-managed and may not meet its investment objective based on the Model's implementation of the investment strategies for the Fund, subject to the oversight and monitoring of the Sub-Adviser.

Models and Data Risk. The Fund's portfolio holdings are fully dependent on proprietary models as well as information and data supplied by third parties (Models and Data). When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon may lead to the inclusion or exclusion of securities from the Fund's portfolio that would have been excluded or included had the Models and Data been correct and complete. Additionally, technology risk arises from the use of computer models and algorithms; any technical failures, coding errors, or cybersecurity breaches could disrupt the Fund's trading activities, potentially leading to significant financial losses and compromised data integrity.

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions. There can be no assurance that the Fund will grow to or maintain an economically viable size.

New Sub-Adviser Risk. The Sub-Adviser is a recently formed entity and has no experience with managing an ETF, which may limit the Sub-Adviser's effectiveness.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and have a greater impact on the Fund's performance.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties, or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund, Adviser, and Sub-Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Recent Market Events Risk. U.S. and international markets have experienced and may continue to experience significant periods of volatility in recent years and months due to a number of economic, political and global macro factors including uncertainty regarding inflation and central banks' interest rate changes, the possibility of a national or global recession, trade tensions and tariffs, political events, war, and geopolitical conflict. These developments, as well as other events, could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets, despite efforts to address market disruptions. As a result, the risk environment remains elevated.

Sector Focus Risk. The Fund may invest a significant portion of its assets in one or more sectors and as a result will be more susceptible to the risks affecting those sectors. While the Fund’s sector exposure is expected to vary over time, the Fund anticipates that it may be subject to some or all of the sector-specific risks described below, and could be negatively impacted by market events or economic factors affecting such sectors.

Communications Sector Risk. Communication companies are particularly vulnerable to the potential obsolescence of products and services due to technological advancement and the innovation of competitors. Companies in the communications sector may also be affected by other fierce competitive pressures, including pricing competition. They may also be adversely affected by research and development costs, substantial capital requirements, and increased governmental regulation.

Consumer Discretionary Sector Risk. The success of consumer product manufacturers and retailers is tied closely to the performance of the overall domestic and global economy, interest rates, competition, and consumer confidence. Success depends heavily on disposable household income and consumer spending. Also, companies in the consumer discretionary sector may be subject to severe competition, which may have an adverse impact on their respective profitability. Changes in demographics and consumer tastes can also affect the demand for, and success of, consumer products and services in the marketplace.

Finance Sector Risk: Companies in the finance sector may underperform the broader markets due to legislative or regulatory changes, adverse market conditions and/or increased competition affecting the sector. Companies operating in the finance sector are subject to extensive government regulation, which may limit their ability to leverage their capital. Interest rates and banking fees are also regulated by federal and state authorities. Profitability is largely dependent on the availability and cost of deposit funds, as impacted by statutory reserve requirements which can fluctuate significantly when interest rates change, or the sector faces increased competition from less regulated competitors. The sector is also affected by ongoing technology investments in and upgrades to legacy systems in order to meet regulatory reporting requirements.

Healthcare Sector Risk: Companies’ profitability in the healthcare sector may be negatively impacted by government regulations and government healthcare programs, increases or decreases in the cost of medical products and services, an increased emphasis on outpatient services, and product liability claims, among other factors. Many healthcare companies are heavily dependent on patent protection, and the expiration of a company’s patent may adversely affect that company’s profitability. Healthcare companies are subject to competitive forces that may result in price discounting, and may be thinly capitalized and susceptible to product obsolescence.

Technology Sector Risk. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.

Short Sales Risk. In connection with a short sale of a security or other instrument, the Fund is subject to the risk that instead of declining, the price of the security or other instrument sold short will rise. If the price of the security or other instrument sold short increases, the Fund will experience a loss, which is theoretically unlimited since there is a theoretically unlimited potential for the market price of a security or other instrument sold short to increase.

PORTFOLIO HOLDINGS INFORMATION

Information about each Fund’s daily portfolio holdings will be available on the Funds’ website at www.finqai.com/etfs. A complete description of the Funds’ policies and procedures with respect to the disclosure of the Funds’ portfolio holdings is available in the Funds’ Statement of Additional Information (the “SAI”).

MANAGEMENT

Investment Adviser

Tidal Investments LLC, a Tidal Financial Group company, located at 234 West Florida Street, Suite 700, Milwaukee, Wisconsin 53204, is an SEC-registered investment adviser and a Delaware limited liability company. Tidal was founded in March 2012 and is dedicated to understanding, researching, and managing assets within the expanding ETF universe. As of December 31, 2025 Tidal had assets under management of approximately \$46.33 billion and served as the investment adviser or sub-adviser for 322 registered funds.

Tidal serves as investment adviser to the Funds and has overall responsibility for the general management and administration of the Funds pursuant to an investment advisory agreement with the Trust, on behalf of each Fund (the “Advisory Agreement”). The Adviser is responsible for trading portfolio securities and financial instruments for the Funds, including selecting broker-dealers to execute purchase and sale transactions. The Adviser provides oversight of the Sub-Adviser and review of its performance. The Adviser also arranges for transfer agency, custody, fund administration, and all other related services necessary for the Funds to operate. For the services provided to the Funds, each Fund pays the Adviser a unitary management fee, which is calculated daily and paid monthly, at an annual rate set forth in the table below based on such Fund’s average daily net assets.

Fund Name	Advisory Fee Rate
FINQ FIRST U.S. Large Cap AI-Managed Equity ETF	0.70%
FINQ DOLLAR NEUTRAL U.S. Large Cap AI-Managed Equity ETF	1.25%

Under the Advisory Agreement, in exchange for a single unitary management fee from each Fund, the Adviser has agreed to pay all expenses incurred by such Fund except for Excluded Expenses and the unitary management fee payable to the Adviser.

Investment Sub-Adviser

FINQ AI, LLC, a Delaware limited liability company, located at 9 Ahad Ha’am Street, Tel Aviv, Tel-Aviv District, Israel 6514224, serves as the investment sub-adviser for the Funds. The Sub-Adviser was founded in April 2023 and became an SEC-registered investment adviser in March 2025. As of December 31, 2025, the Sub-Adviser had no assets under management.

The Sub-Adviser is responsible for oversight of the Fund’s portfolio and supervision and monitoring of the Model that selects each Fund’s investment portfolio on a day-to-day basis, subject to the oversight of the Adviser and the Board. The Sub-Adviser serves as the sub-adviser to the Funds, pursuant to a sub-advisory agreement between the Adviser and the Sub-Adviser (a “Sub-Advisory Agreement”).

For its services as sub-adviser, the Sub-Adviser is entitled to receive a fee from the Adviser, which fee is calculated daily and payable monthly, at an annual rate of 0.04% of the average daily net assets of each Fund. However, as fund sponsor, the Sub-Adviser may automatically waive all or a portion of its sub-advisory fee with respect to each Fund. See “Fund Sponsor” below for more information.

Advisory and Sub-Advisory Agreements

A discussion regarding the basis for the Board’s approval of the Fund’s Advisory Agreement and Sub-Advisory Agreements will be available in the Fund’s next semi-annual or annual report to shareholders on Form N-CSR.

Portfolio Managers

Since their inception in 2026, Dan Solomon has been primarily responsible for the day-to-day management of the Funds, and Charles A. Ragauss, CFA has overseen trading and execution for each Fund.

Dan Solomon, Portfolio Manager for the Sub-Adviser

Mr. Solomon is an Israeli-licensed portfolio manager with over six years’ experience in equity research, investment strategy and portfolio management. He joined the Sub-Adviser in June 2024 and currently serves as an Equity Research Analyst, leading company-level analysis and supporting fund strategy development. Prior to joining the Sub-Adviser, Mr. Solomon spent nearly six years at Infinity Investment Group, a wealth management firm, where he managed portfolios for high net worth individuals and corporate clients, with responsibilities including developing tailored investment plans, conducting deep-dive equity and asset allocation analyses, financial modeling and identifying macro and sector-specific investment opportunities. Mr. Solomon received a Bachelor of Arts degree in Business Administration and Finance from Reichman University, Herzliya, Tel Aviv District, Israel in 2018.

Charles A. Ragauss, CFA, Portfolio Manager for the Adviser

Mr. Ragauss serves as Portfolio Manager of the Adviser, having joined the Adviser in September 2020. Mr. Ragauss previously served as Chief Operating Officer and in other roles at CSat Investment Advisory, L.P. from April 2016 to September 2020. Previously, Mr. Ragauss was Assistant Vice President at Huntington National Bank (“Huntington”), where he was Product Manager for the Huntington Funds and Huntington Strategy Shares ETFs, a combined fund complex of almost \$4 billion in assets under management. At Huntington, he led ETF development, bringing to market some of the first actively-managed ETFs. Mr. Ragauss joined Huntington in 2010. Mr. Ragauss attended Grand Valley State University where he received his Bachelor of Business Administration in Finance and International Business, as well as a minor in French. He is a member of both the National and West Michigan CFA societies and holds the CFA designation.

CFA® is a registered trademark owned by the CFA Institute.

The Funds’ SAI provides additional information about each portfolio manager’s compensation structure, other accounts that each portfolio manager manages, and each portfolio manager’s ownership of Shares.

Fund Sponsor

The Adviser has entered into a fund sponsorship agreement with the Sub-Adviser pursuant to which the Sub-Adviser is a sponsor to the Funds. Under this arrangement, the Sub-Adviser has agreed to provide financial support (as described below) to the Funds. Every month, unitary management fees for the Funds are calculated and paid to the Adviser, and the Adviser retains a portion of the unitary management fees from the Funds.

In return for its financial support for the Funds, the Adviser has agreed to pay the Sub-Adviser any remaining profits generated by the Funds' unitary management fee. If the amount of the unitary management fees for a Fund exceeds the Fund's operating expenses (including the sub-advisory fee) and the Adviser-retained amount, that excess amount is considered "remaining profit." In that case, the Adviser will pay the remaining profits to the Sub-Adviser.

During months when the funds generated by the unitary management fee are insufficient to cover the entire sub-advisory fee, those fees are automatically waived, and any such waivers are not subject to recoupment. Further, if the amount of the unitary management fee for a Fund is less than the Fund's operating expenses and the Adviser-retained amount, the Sub-Adviser is obligated to reimburse the Adviser for the shortfall.

HOW TO BUY AND SELL SHARES

Each Fund issues and redeems Shares only in Creation Units at the NAV per share next determined after receipt of an order from an AP. Only APs may acquire Shares directly from a Fund, and only APs may tender their Shares for redemption directly to a Fund, at NAV. APs must be a member or participant of a clearing agency registered with the SEC and must execute a Participant Agreement that has been agreed to by the Distributor (defined below), and that has been accepted by the Funds' transfer agent, with respect to purchases and redemptions of Creation Units. Once created, Shares trade in the secondary market in quantities less than a Creation Unit.

Most investors buy and sell Shares in secondary market transactions through brokers. Individual Shares are listed for trading on the secondary market on the Exchange and can be bought and sold throughout the trading day like other publicly traded securities.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offer price in the secondary market on each leg of a round trip (purchase and sale) transaction. In addition, because secondary market transactions occur at market prices, you may pay more than NAV when you buy Shares, and receive less than NAV when you sell those Shares.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of all outstanding Shares.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. DTC's participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book-entry or "street name" through your brokerage account.

Frequent Purchases and Redemptions of Shares

The Funds impose no restrictions on the frequency of purchases and redemptions of Shares. In determining not to approve a written, established policy, the Board evaluated the risks of market timing activities by Fund shareholders. Purchases and redemptions by APs, who are the only parties that may purchase or redeem Shares directly with the Funds, are an essential part of the ETF process and help keep Share trading prices in line with the Fund's NAV. As such, the Funds accommodate frequent purchases and redemptions by APs. However, the Board has also determined that frequent purchases and redemptions for cash may increase tracking error and portfolio transaction costs and may lead to the realization of capital gains. To minimize these potential consequences of frequent purchases and redemptions, the Funds employ fair value pricing and may impose transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs incurred by the Funds in effecting trades. In addition, the Funds and the Adviser reserve the right to reject any purchase order at any time.

Determination of Net Asset Value

Each Fund's NAV is calculated as of the scheduled close of regular trading on the New York Stock Exchange ("NYSE"), generally 4:00 p.m. Eastern Time, each day the NYSE is open for regular business. The NAV for each Fund is calculated by dividing such Fund's net assets by its Shares outstanding.

In calculating its NAV, each Fund generally values its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. If such information is not available for a security or other asset held by a Fund or is determined to be unreliable, the security or other asset will be valued at fair value estimates under guidelines established by the Trust and the Adviser (as described below).

Fair Value Pricing

Consistent with Rule 2a-5 under the 1940 Act, the Trust and the Adviser have adopted procedures and methodologies wherein the Adviser, serving as the Funds' Valuation Designee (as defined in Rule 2a-5), determines the fair value of Fund investments whose market prices are not "readily available" or are deemed to be unreliable. For example, such circumstances may arise when: (i) an investment has been delisted or has had its trading halted or suspended; (ii) an investment's primary pricing source is unable or unwilling to provide a price; (iii) an investment's primary trading market is closed during regular market hours; or (iv) an investment's value is materially affected by events occurring after the close of the investment's primary trading market. Generally, when fair valuing an investment, the Valuation Designee will take into account all reasonably available information that may be relevant to a particular valuation including, but not limited to, fundamental analytical data regarding the issuer, information relating to the issuer's business, recent trades or offers of the investment, general and/or specific market conditions, and the specific facts giving rise to the need to fair value the investment. Fair value determinations are made in good faith and in accordance with the Adviser's fair value methodologies, subject to oversight by the Board. Due to the subjective and variable nature of fair value pricing, there can be no assurance that the Adviser will be able to obtain the fair value assigned to the investment upon the sale of such investment.

Investments by Other Registered Investment Companies in the Funds

Section 12(d)(1) of the 1940 Act restricts investments by registered investment companies in the securities of other investment companies, including Shares. Registered investment companies are permitted to invest in the Funds beyond the limits set forth in Section 12(d)(1), subject to certain terms and conditions set forth by the rule under the 1940 Act, including that such investment companies enter into an agreement with the Funds.

Delivery of Shareholder Documents – Householding

Householding is an option available to certain investors of the Funds. Householding is a method of delivery, based on the preference of the individual investor, in which a single copy of certain shareholder documents can be delivered to investors who share the same address, even if their accounts are registered under different names. Householding for the Funds is available through certain broker-dealers. If you are interested in enrolling in householding and receiving a single copy of prospectuses and other shareholder documents, please contact your broker-dealer. If you are currently enrolled in householding and wish to change your householding status, please contact your broker-dealer.

DIVIDENDS, DISTRIBUTIONS, AND TAXES

Dividends and Distributions

Each Fund intends to pay out dividends and interest income, if any, annually, and distribute any net realized capital gains to its shareholders at least annually.

Each Fund will declare and pay income and capital gain distributions, if any, in cash. Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

Dividend payments and the timing of distributions, including ex-dividend dates, are determined by the Funds and may change. Historical and upcoming ex-dividend and distribution dates are available on the Funds' website. Shareholders and prospective shareholders should refer to the Funds' website or contact the Funds for the most current dividend schedule.

Taxes

The following discussion is a summary of some important U.S. federal income tax considerations generally applicable to investments in the Funds. Your investment in a Fund may have other tax implications. Please consult your tax advisor about the tax consequences of an investment in Shares, including the possible application of foreign, state, and local tax laws.

Each Fund intends to qualify each year for treatment as a RIC under the Code. If it meets certain minimum distribution requirements, a RIC is not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, a Fund's failure to qualify as a RIC or to meet minimum distribution requirements would result (if certain relief provisions were not available) in fund-level taxation and, consequently, a reduction in income available for distribution to shareholders.

Unless your investment in Shares is made through a tax-exempt entity or tax-deferred or other tax-advantaged account, such as an IRA plan, you need to be aware of the possible tax consequences when a Fund makes distributions, when you sell your Shares listed on the Exchange, and when you purchase or redeem Creation Units (institutional investors only).

The following general discussion of certain U.S. federal income tax consequences is based on provisions of the Code and the regulations issued thereunder as in effect on the date of this Prospectus. New legislation, as well as administrative changes or court decisions, may significantly change the conclusions expressed herein, and may have a retroactive effect with respect to the transactions contemplated herein.

Taxes on Distributions. For federal income tax purposes, distributions of net investment income are generally taxable to shareholders as ordinary income or qualified dividend income. Taxes on distributions of net capital gains (if any) are determined by how long a Fund owned the investments that generated them, rather than how long a shareholder has owned their Shares. Sales of assets held by a Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by such Fund for one year or less generally result in short-term capital gains and losses. Distributions of a Fund's net capital gain (the excess of net long-term capital gains over net short-term capital losses) that are reported by such Fund as capital gain dividends ("Capital Gain Dividends") will be taxable as long-term capital gains to shareholders. Distributions of short-term capital gain will generally be taxable to shareholders as ordinary income. Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional Shares.

Distributions reported by a Fund as "qualified dividend income" are generally taxed to non-corporate shareholders at rates applicable to long-term capital gains, provided certain holding period and other requirements are met. "Qualified dividend income" generally is income derived from dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that a Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. Corporate shareholders may be entitled to a dividends-received deduction for the portion of dividends they receive from a Fund that are attributable to dividends received by such Fund from U.S. corporations, subject to certain limitations.

Shortly after the close of each calendar year, you will be informed of the character of any distributions received from a Fund.

In addition to the federal income tax, certain individuals, trusts, and estates may be subject to a Net Investment Income ("NII") tax of 3.8%. The NII tax is imposed on the lesser of: (i) a taxpayer's investment income, net of deductions properly allocable to such income; or (ii) the amount by which such taxpayer's modified adjusted gross income exceeds certain thresholds (\$250,000 for married individuals filing jointly, \$200,000 for unmarried individuals and \$125,000 for married individuals filing separately). Each Fund's distributions are includable in a shareholder's investment income for purposes of this NII tax. In addition, any capital gain realized by a shareholder upon a sale or redemption of Fund shares is includable in such shareholder's investment income for purposes of this NII tax.

In general, your distributions are subject to federal income tax for the year in which they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year. Distributions are generally taxable even if they are paid from income or gains earned by a Fund before your investment (and thus were included in the Shares' NAV when you purchased your Shares).

If you are neither a resident nor a citizen of the United States or if you are a foreign entity, distributions (other than Capital Gain Dividends) paid to you by a Fund will generally be subject to a U.S. withholding tax at the rate of 30%, unless a lower treaty rate applies. A Fund may, under certain circumstances, report all or a portion of a dividend as an "interest-related dividend" or a "short-term capital gain dividend," which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met.

Under the Foreign Account Tax Compliance Act ("FATCA"), a Fund may be required to withhold a generally nonrefundable 30% tax on (i) distributions of investment company taxable income and (ii) distributions of net capital gain and the gross proceeds of a sale or redemption of Fund Shares paid to (A) certain "foreign financial institutions" unless such foreign financial institution agrees to verify, monitor, and report to the IRS the identity of certain of its account-holders, among other items (or unless such entity is otherwise deemed compliant under the terms of an intergovernmental agreement between the United States and the foreign financial institution's country of residence), and (B) certain "non-financial foreign entities" unless such entity certifies to the Fund that it does not have any substantial U.S. owners or provides the name, address, and taxpayer identification number of each substantial U.S. owner, among other items. In December 2018, the IRS and Treasury Department released proposed Treasury Regulations that would eliminate FATCA withholding on Fund distributions of net capital gain and the gross proceeds from a sale or redemption of Fund Shares. Although taxpayers are entitled to rely on these proposed Treasury Regulations until final Treasury Regulations are issued, these proposed Treasury Regulations have not been finalized, may not be finalized in their proposed form, and are potentially subject to change. This FATCA withholding tax could also affect a Fund's return on its investments in foreign securities or affect a shareholder's return if the shareholder holds its Fund Shares through a foreign intermediary. You are urged to consult your tax adviser regarding the application of this FATCA withholding tax to your investment in a Fund and the potential certification, compliance, due diligence, reporting, and withholding obligations to which you may become subject in order to avoid this withholding tax.

Each Fund (or a financial intermediary, such as a broker, through which a shareholder owns Shares) generally is required to withhold and remit to the U.S. Treasury a percentage of the taxable distributions and sale or redemption proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has underreported dividend or interest income, or who fails to certify that they are not subject to such withholding.

Taxes When Shares are Sold on an Exchange

Any capital gain or loss realized upon a sale of Shares generally is treated as a long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent of Capital Gain Dividends paid with respect to such Shares. Any loss realized on a sale will be disallowed to the extent Shares of a Fund are acquired, including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the sale of substantially identical Shares.

Taxes on Purchases and Redemptions of Creation Units

An AP having the U.S. dollar as its functional currency for U.S. federal income tax purposes who exchanges securities for Creation Units generally recognizes a gain or a loss. The gain or loss will be equal to the difference between the value of the Creation Units at the time of the exchange and the exchanging AP's aggregate basis in the securities delivered plus the amount of any cash paid for the Creation Units. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanging AP's basis in the Creation Units and the aggregate U.S. dollar market value of the securities received, plus any cash received for such Creation Units. The IRS may assert, however, that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing "wash sales" (for an AP who does not mark-to-market their holdings) or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if Shares comprising the Creation Units have been held for more than one year and as a short-term capital gain or loss if such Shares have been held for one year or less.

The Funds may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. The Funds may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause a Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, a Fund may be less tax efficient if it includes such a cash payment in the proceeds paid upon the redemption of Creation Units.

Important Tax Considerations When Purchasing Fund Shares

If you are investing through a taxable account, you should carefully consider the timing of your investment relative to a Fund's distribution schedule. Purchasing Fund shares shortly before a distribution may increase your tax liability, a situation commonly referred to as "buying a dividend."

When a Fund makes a distribution, its share price typically drops by an amount roughly equal to the distribution. As a hypothetical example, if you invest \$5,000 to purchase 250 shares at \$20 per share on December 15, and the Fund pays a \$1 per share distribution on December 16, the share price would adjust to \$19 (ignoring market fluctuations). Although your total investment value remains \$5,000 (250 shares × \$19 in share value plus 250 shares × \$1 distribution), you would owe taxes on the \$250 distribution, even if you reinvest the distribution rather than receiving it in cash.

Distributions are taxable to shareholders even if they are paid from income or gains realized by a Fund before you invested, and even if they were reflected in the purchase price of the shares. Consequently, you may incur taxes on income or gains that accrued before your investment, without corresponding benefit.

Unless you are investing through a tax-advantaged account, such as an IRA or an employer-sponsored retirement plan, you may wish to avoid purchasing Fund shares shortly before a distribution. You can minimize the potential tax impact by reviewing the relevant Fund's distribution schedule prior to investing. When available, information about a Fund's distribution schedule can be found on the Funds' website at www.finqai.com/etfs.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Funds. It is not a substitute for personal tax advice. You also may be subject to foreign, state, and local tax on Fund distributions and sales of Shares. Consult your personal tax advisor about the potential tax consequences of an investment in Shares under all applicable tax laws. For more information, please see the section entitled "Federal Income Taxes" in the SAI.

DISTRIBUTION

Foreside Fund Services, LLC, a wholly owned subsidiary of Foreside Financial Group (dba ACA Group) (the “Distributor”), the Funds’ distributor, is a broker-dealer registered with the SEC. The Distributor distributes Creation Units for the Funds on an agency basis and does not maintain a secondary market in Shares. The Distributor has no role in determining the policies of the Funds or the securities that are purchased or sold by the Funds. The Distributor’s principal address is 190 Middle Street, Suite 301, Portland, Maine 04101.

The Board has adopted a Distribution (Rule 12b-1) Plan (the “Plan”) pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, the Funds are authorized to pay an amount up to 0.25% of its average daily net assets each year to pay distribution fees for the sale and distribution of its Shares.

No Rule 12b-1 fees are currently paid by the Funds, and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because the fees are paid out of assets of the respective Fund on an ongoing basis, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

PREMIUM/DISCOUNT INFORMATION

When available, information regarding how often Shares of a Fund traded on the applicable Exchange at a price above (i.e., at a premium) or below (i.e., at a discount) the NAV of the applicable Fund can be found on the Funds’ website at www.finqai.com/etfs.

ADDITIONAL NOTICES

Shares are not sponsored, endorsed, or promoted by the Exchange. The Exchange is not responsible for, nor has it participated in the determination of, the timing, prices, or quantities of Shares to be issued, nor in the determination or calculation of the equation by which Shares are redeemable. The Exchange has no obligation or liability to owners of Shares in connection with the administration, marketing, or trading of Shares.

Without limiting any of the foregoing, in no event shall the Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

The Adviser, the Sub-Adviser, and each Fund make no representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the advisability of investing in securities generally or in the Funds particularly.

Delaware law permits the governing documents of a statutory trust to expand, restrict or eliminate the fiduciary duties that trustees, shareholders or other persons might otherwise be subject to, and replace them with the standards set forth in the Trust’s governing documents.

The Trust’s Amended and Restated Declaration of Trust (the “Declaration of Trust”) provides that the Trustees shall not be subject to fiduciary duties except as set forth in the Declaration of Trust. The foregoing relates specifically to Delaware laws. Nothing in the Declaration of Trust modifying, restricting, or eliminating the duties or liabilities of trustees shall apply to, or in any way limit, the duties (including state law fiduciary duties of loyalty and care) or liabilities of such persons with respect to matters arising under the federal securities laws.

FINANCIAL HIGHLIGHTS

This section would ordinarily include Financial Highlights for the Funds. The Financial Highlights tables are intended to help you understand the performance of each Fund for that Fund’s periods of operations. Because the Funds have not yet commenced operations as of the date of this Prospectus, no Financial Highlights are shown.
